

# Pomelle Mahogany

## BOTANICAL NAMES

Entandrophragma Cylindricum

## TRADE NAMES

Baywood, Mogano, Mahagoni, Mahogany.

## GROWTH AREA

Africa

## TECHNOLOGICAL FEATURES

The many small knots of varying sizes, arranged next to each other, are the distinctive feature of this wood. The many dark brown sinuosities are the result of a structural defect in the log due to a different composition of the wood fibers. Unlike the burls, these bubbles and knots are not caused by the formation of buds, which are incorporated prematurely into the log fibres.

## DRYING METHOD

Tending only on rare occasions to crack, this wood is easily dried

## SPECIFIC WEIGHT

500-700 kg/m<sup>3</sup> (air cured)

## MAIN USES AND WORKING

Used in high-end furniture.
